

DYNANAIL HYBRID[™]

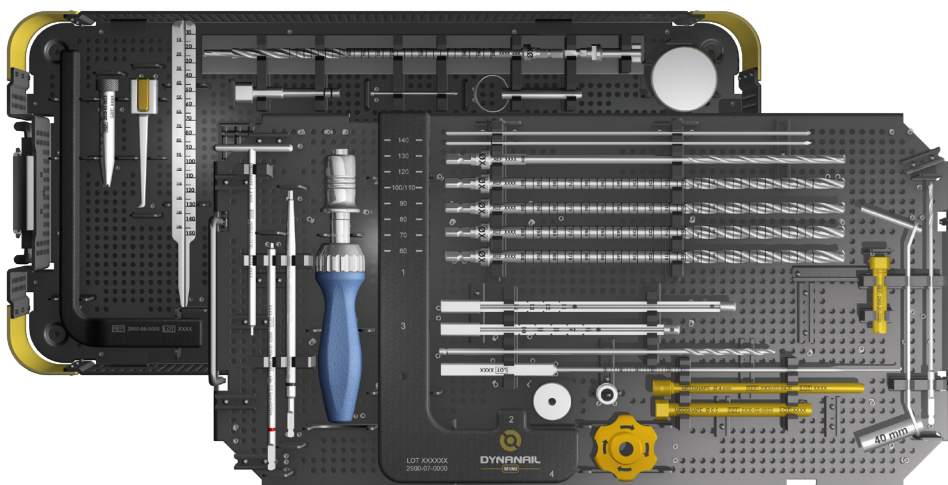

FUSION SYSTEM

Active, adaptive compression for subtalar fusion in an easy-to-insert design.

NAIL SYSTEM

FEATURES & BENEFITS:

- Hybrid screw/nail design combines dynamic, compressive power with simple, intuitive insertion.
- Internal NiTiNOL element offers between 2 - 5 mm of active compression in response to bone settling or resorption, PLUS manual intraoperative compression.
- 16 mm proximal talar threads allow for easy insertion, similar to a screw.
- Distal transverse screw provides additional stability and prevents device migration.
- NiTiNOL Compressive Element comes pre-stretched and pre-loaded on a disposable Nail Guide for enhanced efficiency.

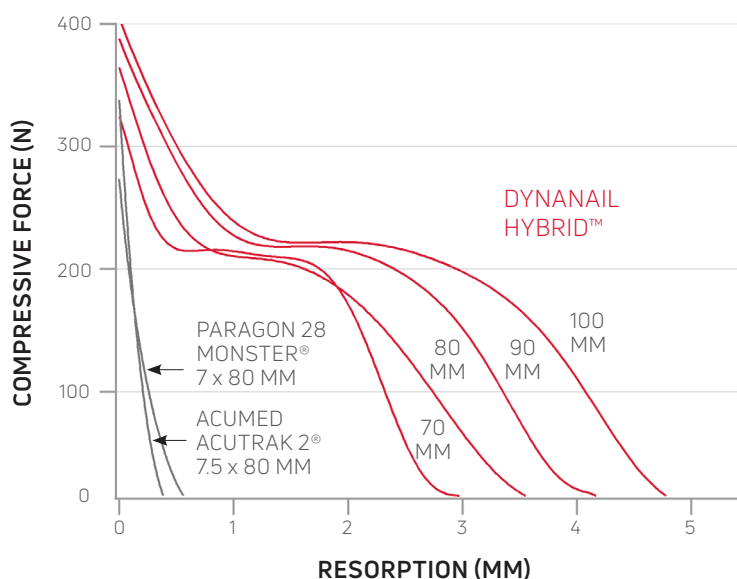

UNIVERSAL INSTRUMENTATION

Shares the same instrumentation as the DynaNail Mini[®] to provide ease-of-use and intra-operative flexibility.

THE ULTIMATE IN MAINTAINED ACTIVE COMPRESSION

Unlike traditional screws that lose compression post-operatively, the DynaNail Hybrid™ maintains compression up to 5 mm of bone resorption or settling depending on implant length.¹
